

RUSHABH FULKARI

SENIOR FLUTTER DEVELOPER

rushabhfulkari@gmail.com | +91-8105293356 | github.com/rushabhfulkari | linkedin.com/in/rushabh-fulkari-b5200b120

ABOUT ME

Senior Flutter Developer with 5+ years architecting production-scale cross-platform applications serving 60M+ users globally. Expert in multi-flavor systems, CI/CD automation, clean architecture patterns, and delivering enterprise solutions from POC to production.

TECHNICAL SKILLS

Flutter, Dart BLOC, Riverpod, Provider, Getit, Cubit Clean Architecture Native Platform Channels REST APIs, Dio, Retrofit
built_value, built_collection, JSON Serialization Firebase Google AdMob AppsFlyer Akamai BMP CMP SDK, GDPR, ATT Framework i18n
VoIP, WebRTC, Streamvideo, Agora, Websockets Unit Testing BDD Widget Testing, Integration Testing, Mockito, Mocktail Maestro UI Testing
Raygun Crash Reporting Bitrise, Fastlane, GitHub Actions Android Xcode Python Java C C# Javascript

CUPIDMEDIA

AfroIntroductions **ANDROID** **IOS** | Muslima **ANDROID** **IOS** | ThaiCupid **ANDROID** **IOS** | FilipinoCupid **ANDROID** **IOS**

Ad Monetization Platform — built from zero

- Shipped banner, interstitial and native ad formats across 34 app flavors, writing the native ad factories and platform views on both iOS and Android, and integrating 7 mediation networks (ironSource, Unity, InMobi, Pangle, Liff, Moloco, DT Exchange).
- Made placements, refresh rates and ad-unit IDs remote-configurable so experiments ship without a release; eliminated empty ad slots and wasted requests through session-aware prefetch, request throttling with retry tracking, and fallback handling.

Regulatory Compliance

- Built age verification on Google Play Age Signals and Apple's Declared Age Range API behind a custom fail-open Flutter plugin, covering Texas, Utah, Louisiana and Brazil.

Security & Authentication

- Extended Akamai Bot Manager protection from 3 endpoints to the full account surface with hardened 428 challenge handling, and upgraded the Akamai SDK to v4.3.0.
- Migrated Google Sign-In to v7 with Credential Manager support and retired Iovation for v3 authentication endpoints, cutting sign-in crash-report noise by 40% through error classification.

Stability & Performance

- Led the migration to Sentry for error tracking and performance monitoring, then cut Android ANR risk by stripping the profiling, tracing and watchdog overhead surfaced in Play vitals.

PROJECTS

CADENCE **LIVE DEMO** **SOURCE**

- Flutter reference app: ten production-grade features in one codebase, each with the trade-off it makes written down beside the working code — offline-first sync over SQLite with an outbox queue, backoff and a documented conflict rule; BLE GATT with stream lifecycle and bounded reconnection; server-driven UI on a versioned schema; an LLM agent loop with typed tool schemas and streaming; certificate pinning, Keychain/Keystore and a biometric gate; a WCAG AA audit with computed contrast ratios.
- One screen embedded in native Kotlin and Swift hosts over Pigeon with a pre-warmed engine — both host apps build. 300 tests, zero analyzer issues, CI green on every push.

HIGHLANDS BRAIN **ANDROID** **IOS**

- Built robust call management system using Stream SDK with call initiation, acceptance, rejection, and background handling. Implemented platform-specific call UI with custom ringtone handling, call state management, and background notifications.
- Designed flexible call controller architecture for events, participant management, and call quality monitoring. Added call logs, reconnection handling during network issues, and support for 1:1/group calls with mute/unmute, video toggle, and duration tracking.
- Implemented call state persistence and recovery using BloC for seamless experience across app lifecycle changes.

- Implemented flexible form builder system dynamically rendering field types (text, checkbox, radio, dropdown, signature, file upload) based on API configurations.
- Built multi-step form validation with section-based progress tracking. Integrated employee assignment, status management, and form review workflows. Added image attachments, digital signatures, and PDF generation.
- Managed complex form state using Cubit for responsive UX.

APPRIINTLY

- Built real-time order tracking system with FCM push notifications.
- Created interactive product designer with image manipulation, frame customization, and preview generation.
- Architected robust state management using BLOC for complex product configurations and order workflows.
- Developed admin dashboard with order management, delivery tracking, and real-time status updates.
- Integrated secure payment processing, user authentication, order history, offline persistence with Hive, image caching, and background upload support.

PROFESSIONAL EXPERIENCE

CupidMedia (Social Discovery Group)

May'25 – Present

Mobile Application Developer — Development of 34+ global dating applications serving 30M+ users. Architecting multi-flavor mobile infrastructure with automated CI/CD pipelines. Owning features across onboarding, security (Akamai BMP), monetization (AdMob), UI redesign and modernization, analytics and regulatory compliance.

Unico Connect

Dec'24 – May'25

Flutter Developer — Developed the Brain application Audio-Video call module with real-time communication features using Stream SDK. Implemented call management, background handling, and call quality monitoring with state persistence using BLoC architecture.

Fastenal India

Jul'23 – Dec'24

Flutter Developer — Developed interactive applications for manufacturing department employees using BLoC state management with comprehensive form validation and submission workflows.

Bottlecap Technologies

Oct'21 – Apr'23

Flutter Developer — Developed and maintained social networking, dating, and e-commerce Flutter applications with focus on real-time features, scalable state management, and API integrations.

Other Projects

Jan'21 – Oct'21

Flutter Developer — Daily Crypto News, Outfik, Spot the Truck, PPTS India, Streetrulerz, Cryptax. Delivered diverse mobile solutions across cryptocurrency, fashion, logistics, and automotive sectors.

EDUCATION BACKGROUND

Bachelor of Technology - 7.97 CGPA
National Institute of Technology, Karnataka - 2019 - 2023

ACHIEVEMENTS

2016-2017 : Spent an academic year in USA as a part of Youth Exchange Program (KLYES)
2017 : Part of BUBW peace conference held in Maryland, USA

HOBBIES

Guitar, Rapping, Cricket, Play Station Games, etc

KEY METRICS & IMPACT

Global User Base : 60M+ registered members across 34 dating platforms	Monthly Downloads : 1.4M+ new installs per month
Countries Served : 180+ countries with region-specific optimizations	Languages Supported : 43 languages with full i18n implementation
App Flavors Managed : 34+ Android & iOS variants from single codebase	Deployment Time : 80% reduction via Bitrise CI/CD automation
Release Frequency : Bi-weekly production releases	Test Coverage : 80%+ unit & widget test coverage
